

Are you at risk for Hepatitis C?

You may be at risk if:

- You ever injected illegal drugs, even once or a few times many years ago
- You have shared needles for tattooing or piercing
- You were treated for clotting problems with a blood product made before 1987
- You received a blood transfusion or solid organ transplant before July 1992
- You were ever on long-term kidney dialysis
- A sex partner has Hepatitis C
- Your mother had Hepatitis C before you were born
- You have HIV

If you think you might be at risk, ask your health care provider for a Hepatitis C blood test. For information on Hepatitis C, call 800-334-2437.
